

HUGO CUNHA

CYBER SECURITY & GRC LEAD · INFORMATION SECURITY · SOC · RISK & COMPLIANCE

✉ eng.hugocunha@gmail.com ☎ +351 (0) 915 206 765 ♦ Porto, Portugal — EU work authorisation ▶ linkedin.com/in/cunhahugo ▶ hugocunhacv.github.io

PROFESSIONAL SUMMARY

Security and IT professional with **20+ years** of accountability for the security, governance and availability of production systems — combining hands-on depth (server hardening, network engineering, SIEM, incident response) with the governance side of the discipline: **security policy authorship, risk registers and risk assessments, ISO 27001 and NIST CSF control mapping, vulnerability management, third-party review and GDPR data handling**. Built in international engineering environments (Microsoft Cambridge, Apple Cambridge, Virgin Media U.K.) and, for two decades, as the single point of ownership for security and compliance across three software studios. **CompTIA Security+** and **ISC2 CC** certified; **PECB ISO 27001 Lead Implementer** in progress. Trilingual, immediately available, building towards a **Head of Cyber Security** remit.

CERTIFICATIONS

CompTIA Security+ SY0-701 · Jun 2026 · **ISC2 Certified in Cybersecurity (CC)** · Apr 2026 · **Google Cybersecurity Professional Certificate** · 2026
PECB ISO 27001 Lead Implementer · expected Sept 2026 · **Qualys VMDR & Qualys Vulnerability Management Foundations** · 2026
Research Data Management & FAIR Principles · 2026 · **NAU — Introdução à Segurança da Informação Classificada** · 2026
CENTRI: Blue Team Junior Analyst Pathway · Penetration Testing · Vulnerability Management · Threat Hunting · Digital Forensics · Network Analysis · Dark Web Operations · OSINT

TECHNICAL & GRC SKILLS

Governance, Risk & Compliance: ISO 27001/27002 control mapping, NIST CSF, CIS Controls, policy & standards authorship, risk register & risk assessment, gap analysis, audit evidence, third-party risk, GDPR/NIS2, data classification, business continuity, security awareness training
SIEM & Monitoring: Splunk, ELK/Elastic Stack, Wazuh, Wireshark, Snort, Suricata, TheHive
Security Operations: alert triage, log analysis, phishing analysis, malware analysis, digital forensics, incident response, MITRE ATT&CK, Cyber Kill Chain, IDS/IPS, endpoint security, WAF
Vulnerability Management: Qualys VMDR, Nmap, Burp Suite, OWASP Top 10, scan scoping, risk-based prioritisation, remediation tracking & reporting
Infrastructure: Linux (Kali, Ubuntu, CentOS), Windows Server, macOS, LAN/WAN, VLANs, VPNs, IPsec, DHCP, DNS, NAT, Cisco routers, firewalls, Active Directory, IAM/least privilege
Development & Automation: Python, Bash, PowerShell, HTML/CSS/JS, Git, Autopsy, VirusTotal, WordPress, web server administration

PROFESSIONAL EXPERIENCE

Web Server Security Administrator & IT Governance Owner — Axtion Games / MicroDual / 100Loops / MTM 2003 – Present
Role: sole owner of information security, governance and compliance for three independent companies — I set the policy, run the risk process, and implement the controls myself on the production estate.

- ▶ **Governance**: authored and maintain security policy set — access control, acceptable use, secure development, backup & retention, incident response — mapped to ISO 27001 Annex A and NIST CSF, and reviewed annually.
- ▶ **Risk management**: own the asset inventory and risk register; run recurring risk assessments (likelihood/impact scoring), agree treatment plans with owners, and report residual risk to management in non-technical terms.
- ▶ **Compliance & vulnerability management**: third-party review (hosting, payment, plugins), GDPR records of processing and retention for player data, audit-ready evidence; scheduled scanning and patch cycles with risk-based prioritisation tracked to closure against SLA.
- ▶ **Engineering**: system hardening, least-privilege IAM, SSL/TLS and DNS, WAF tuning, tested backup/restore and disaster recovery; log review, anomaly investigation, incident containment and post-incident corrective actions.

Network Engineer (Security & Change Control) — MTM 2019 – 2026
Role: designed, secured and documented client LAN/WAN estates, and governed every change made to them.

- ▶ Designed and maintained routers, switches, firewalls and VPN tunnels; enforced network segmentation, VLAN policy and role-based access to network devices.
- ▶ **Change & configuration governance**: documented configuration baselines and network diagrams, ran change requests with rollback plans, and performed periodic firewall rule and admin-account reviews.
- ▶ Monitored performance and security events under SLA; diagnosed incidents, implemented corrective measures and fed recurring causes back into standards.

Audio Software Developer, Gaming — Microsoft Cambridge May 2013 – Sep 2014
Role: engineer on an audio component team inside Microsoft's Cambridge studio, working to the company's secure SDLC and release gates.

- ▶ Built audio software components for gaming platforms within a structured SDLC — mandatory peer code review, QA gates and internal engineering/security standards enforced at enterprise scale.

Helpdesk & Escalation, Marketing Manager — Virgin Media U.K. Apr 2013 – Sep 2017
Role: first-line and escalation support for broadband, network and TV customers in a high-volume, SLA-driven operation.

- ▶ Triageed and escalated incidents under SLA; handled customer records under the company's data-protection procedures, escalated suspected fraud, phishing and account-takeover cases, and improved resolution workflows.

Junior Data Analyst / Software Developer (Dragon App) — Apple Cambridge Jun 2010 – Jul 2012
Role: analyst-developer on an internal engineering team, working with pre-release data under strict confidentiality controls.

- ▶ Built analytical workflows and contributed to the Dragon App project; handled classified and pre-release information under NDA, need-to-know access and data-handling rules.

Web Developer & Data Protection Contact — Alliance BJJ Porto 2019 – 2026
▶ Full-stack development and hosting; server configuration, SSL/TLS and access control, plus member-data consent, retention and GDPR requests for the club.

Open-Source Contributor — Reddit Online / Popcorn Time · macOS Beta Tester — Apple (2006–Present) · Web Designer — Dealema Musicians 2010 – Present (1999–2003)

PROJECTS & LAB WORK

TryHackMe SOC Level 1 — 31 rooms, 6 modules: SOC Fundamentals, Alert Triage, Alert Reporting, Splunk, Elastic Stack, MITRE ATT&CK. Writeups at hugocunhacv.github.io

ISMS starter pack — self-built ISO 27001-style scope statement, risk register, control matrix and policy templates, used to run real assessments on my own estate. · **ThePassLab** — flashcard site for passing Security+ and ISC2 CC in 30 days.

EDUCATION & PROFESSIONAL DEVELOPMENT

FEUP, University of Porto — Network Operating Systems · Network Protocols & Equipment · IT Technician Level 4 (2006)
Cambridge University Seminars — Network Security & Code Injection · National Infrastructure Cyber Attack · Business of Encryption · Policy-Making & the Data Revolution · Challenges of Cyber Warfare

ADDITIONAL

Languages: Portuguese (native), English (fluent), Spanish (fluent), French & German (intermediate) • **Availability**: immediate — Porto on-site, hybrid or remote EU/UK • **Next**: ISO 27001 Lead Implementer, CISSP
